Hrithik suffers leg injury

Song shoot with Jr NTR gets postponed

✓ Hrithik Roshan has suffered a leg injury during the rehearsals of an energetic dance-off with Jr NTR for *War 2*. Sources say that the actor has been advised rest for four weeks. The shoot of the song has been postponed, will be filmed in May tentatively. However, the movie's release date remains unchanged.

Sources say that Hrithik pushed himself a bit too hard during the rehearsal. The movie

is reportedly in post-production stage, and this minor hiccup is not interfering with the promotion plans of the film. The movie will be releasing August 14 this year.

War 2, directed by Ayan Mukerji, is a part of Aditya Chopra's YRF Spy Universe. Apart from Hrithik Roshan and Jr NTR, the film also stars Kiara Advani. The film is a sequel to *War*, a 2019 action thriller film, directed by Siddharth Anand.

Fatty liver: The emerging crisis

Over 45% Indians are affected by non-alcoholic fatty liver disease (NAFLD), warns expert

SWATI SHARMA

DECCAN CHRONICLE

Recently, Bollywood actor Hrithik Roshan's sister Sunaina shared her inspiring journey of overcoming fatty liver; through mindful eating and regular exercise, Sunaina asserts she is now "completely cured" of her Grade 3 fatty liver.

Fatty liver disease, a condition characterised by the accumulation of fat in the liver, is becoming a growing concern worldwide, with approximately 30% of adults impacted by it. Fatty liver can manifest as either alcoholic fatty liver disease or non-alcoholic fatty liver disease (NAFLD), resulting from an accumulation of fat in the liver that is not linked to excessive alcohol intake. "Fatty liver is found in one among five individuals in India, and most of them consider it normal, though it is not really so. Fatty liver is due to excess fat within the liver, which, if not controlled, can lead to inflammation, scarring at a later stage, liver cirrhosis. With 30 per cent of the population suffering from incidence of severe fatty liver, it is a cause for concern," explains Professor Dr. Tom Cherian, senior liver transplant surgeon and managing director of South Asian Liver Institute.

CAUSES

Fatty liver occurs when the fat content in the liver surpasses the usual amount. "When the fat content in the liver reaches up to 10 percent, it is considered mild; between 10 and 30 percent is classified as moderate, while anything over 30 percent is deemed severe and necessitates medical intervention," says Dr. Cherian. Non-alcoholic fatty liver disease (NAFLD) is

the scientific name for 'fatty liver'. By definition, these are people who do not abuse alcohol. "While many individuals with NAFLD experience only the presence of simple fat in their liver cells, some may progress to a more complex condition marked by fat accompan-

ied by an

the presence of advanced liver disease or cirrhosis. "But it must be noted that early fatty liver is virtually symptom free. It is only during the advanced stages that it gets identified in patients. Although liver biopsy is the only method of confirming the presence of NAFLD, basic blood tests and a good quality ultrasound can warn of the presence of this disease in most patients before symptoms. However, those who are obese or diabetic must check their livers once a year via ultrasounds and blood tests," says the Dr.

DIAGNOSIS

In recent times, it is not unusual for someone to have an incidental ultrasound report that says 'grade 1 or 2 fatty liver'. In fact, it is so common that many people think it is not a serious abnormality and can be ignored. However, this is not true. A recent study confirmed that liver transplantation for fatty liver now represents the fourth most common reason for transplantation in patients.

IS FATTY LIVER DISEASE IRREVERSIBLE?

"In the early stages (grade 1 to 3), early intervention can reverse the process of the disease. But once cirrhosis sets in, in most cases even if the injury is removed, further progression and symptoms is likely," he says. NASH can advance to cirrhosis in 9-20 percent of patients, with about half experiencing symptoms within seven years, and it is also linked to the onset of liver cancer. Liver transplantation (LT) is the preferred approach for these patients, and the results are promising, with 1- and 5-year survival rates reaching 80 percent.

NON-ALCOHOLIC FATTY LIVER DISEASE CASES RISE

Due to obesity, hypertension and diabetes mellitus, the prevalence is found to be as high as 45 per cent. Carbohydrates, in the form of rice, are a central component that can lead to accumulation of triglycerides within the liver. "This process, overtime, leads to significant liver scarring and eventual progression of disease. It is a preventable disease if people take the right steps in time," warns Dr. Cherian.

A FEW TIPS TO MAINTAIN GOOD LIVER HEALTH

- A good diet and exercise to prevent obesity.
- Refrain from regular and excessive alcohol (an occasional drink e.g. one glass of wine once a fortnight does not hurt).
- Ensure good sugar level control if diabetic.
- Get vaccinated against deadly liver viruses like Hepatitis B.

inflammatory aspect referred to as non-alcoholic steatohepatitis (NASH). The latter is closely linked to the progression of liver scarring and ultimately, liver cirrhosis," he adds.

SYMPTOMS

Bleeding from the intestines or elsewhere, itching, jaundice (yellow skin and eyes), ascites (water within the abdomen), are some symptoms that suggest

"CONSIDERING THE MANY FUNCTIONS PERFORMED BY THE LIVER, MAINTAINING A HEALTHY LIVER WILL SIGNIFICANTLY IMPACT OVERALL HEALTH AND WELL-BEING. OTHERWISE, IT WOULD LEAD TO DISEASES LIKE ACUTE (SUDDEN) HEPATITIS (INFLAMMATION), CHRONIC (LONG DURATION) HEPATITIS, FATTY LIVER DISEASE, CIRRHOSIS (SCARRING), AND LIVER CANCER. AMONG THESE DISEASES, HEPATITIS IS COMMON; CAUSES INFLAMMATION OF THE LIVER, WHICH IN MANY CASES IS SELF-LIMITING. NONETHELESS IT CAN PROGRESS TO FIBROSIS (HARDENING), CIRRHOSIS, OR LIVER CANCER,"

The rise of the zombies

As horror comedies have gained momentum in the last two years, there is another genre creeping into the Hindi film industry— zombie fiction. We have heard that Hrithik Roshan, Kartik Aaryan, and Ranveer Singh are each developing zombie action films, sparking a “silent war” among each other. Reportedly, Hrithik has acquired the rights to adapt *I Am Legend* (2007) for ₹12 crores and is actively

developing it with Kill (2023) director Nikhil Nagesh Bhat. Reports suggest that Ranveer too is producing a zombie film through his own company, which he plans to launch later this year. There is also news that Kartik has approached T-Series to develop a large-scale zombie project starring him, which he wants to market as a “genre-defining movie.”

Hrithik's leg injury delays dance number with Jr NTR in War 2

Jr NTR is all set to make his Hindi film debut with *War 2*, starring alongside Hrithik Roshan. Directed by Ayan Mukerji and produced by Aditya Chopra, the film has been generating a lot of buzz.

NTR and Hrithik started rehearsing for a high-energy dance number that appears in the film's climax. They spent nearly 15 days preparing for the sequence. However, during the shoot, Hrithik sustained a leg injury, forcing him to take a break on doctors' advice. Due to this, the song's

shoot has been postponed.

NTR, who had been stationed in Mumbai for the filming, is now returning to Hyderabad because of the delay, a source revealed. Most of the film, including its action sequences and dialogue portions, has already been completed. Only this dance number and a few remaining scenes are yet to be shot.

Despite this minor setback, the makers remain committed to releasing *War 2* on August 15, coinciding with Independence Day.

In the film, NTR takes on a negative role, marking his grand entry into Bollywood.
