# Fatty liver: The emerging crisis

Over 45% Indians are affected by non-alcoholic fatty liver disease (NAFLD), warns expert

SWATI SHARMA  
DECCAN CHRONICLE

Recently, Bollywood actor Hrithik Roshan's sister Sunaina shared her inspiring journey of overcoming fatty liver; through mindful eating and regular exercise, Sunaina asserts she is now "completely cured" of her Grade 3 fatty liver.

Fatty liver disease, a condition characterised by the accumulation of fat in the liver, is becoming a growing concern worldwide, with approximately 30% of adults impacted by it. Fatty liver can manifest as either alcoholic fatty liver disease or non-alcoholic fatty liver disease (NAFLD), resulting from an accumulation of fat in the liver that is not linked to excessive alcohol intake. "Fatty liver is found in one among five individuals in India, and most of them consider it normal, though it is not really so. Fatty liver is due to excess fat within the liver, which, if not controlled, can lead to inflammation, scar ring at a later stage, liver cirrhosis. With 30 per cent of the population suffering from incidence of severe fatty liver, it is a cause for concern," explains Professor Dr Tom Cherian, senior liver transplant surgeon and managing director of South Asian Liver Institute.

CAUSES

Fatty liver occurs when the fat content in the liver surpasses the usual amount. "When the fat content in the liver reaches up to 10 percent, it is considered mild; between 10 and 30 percent is classified as moderate, while anything over 30 percent is deemed severe and necessitates medical intervention," says Dr Cherian. Non-alcoholic fatty liver disease (NAFLD) is

the scientific name for 'fatty liver.' By definition, these are people who do not abuse alcohol. "While many individuals with NAFLD experience only the presence of simple fat in their liver cells, some may progress to a more complex condition marked by fat accompa-

nied by an

the presence of advanced liver disease or cirrhosis. "But it must be noted that early fatty liver is virtually symptom free. It is only during the advanced stages that it gets identified in patients. Although liver biopsy is the only method of confirming the presence of NAFLD, basic blood tests and a good quality ultrasound can warn of the presence of this disease in most patients before symptoms. However, those who are obese or diabetic must check their livers once a year via ultrasounds and blood tests," says the Dr.

DIAGNOSIS

In recent times, it is not unusual for someone to have an incidental ultrasound report that says 'grade 1 or 2 fatty liver'. In fact, it is so common that many people think it is not a serious abnormality and can be ignored. However, this is not true. A recent study confirmed that liver transplantation for fatty liver now represents the fourth most common reason for transplantation in patients.

IS FATTY LIVER DISEASE IRREVERSIBLE?

"In the early stages (grade 1 to 3), early intervention can reverse the process of the disease. But once cirrhosis sets in, in most cases even if the injury is removed, further progression and symptoms is likely," he says. NASH can advance to cirrhosis in 9-20 percent of patients, with about half experiencing symptoms within seven years, and it is also linked to the onset of liver cancer. Liver transplantation (LT) is the preferred approach for these patients, and the results are promising, with 1- and 5-year survival rates reaching 80 percent.

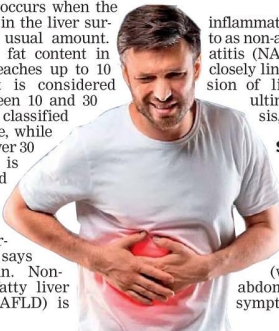

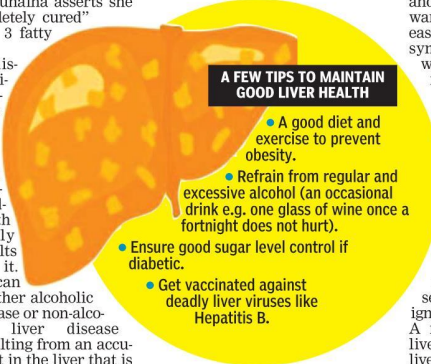

NON-ALCOHOLIC FATTY LIVER DISEASE CASES RISE

Due to obesity, hypertension and diabetes mellitus, the prevalence is found to be as high as 45 per cent Carbohydrates, in the form of rice, are a central component that can lead to accumulation of triglycerides within the liver. "This process, overtime, leads to significant liver scarring and eventual progression of disease. It is a preventable disease if people take the right steps in time," warns Dr Cherian.

**“FATTY LIVER IS FOUND IN ONE AMONG FIVE INDIVIDUALS IN INDIA, AND MOST OF THEM CONSIDER IT NORMAL, THOUGH IT IS NOT REALLY SO. IT IS DUE TO EXCESS FAT WITHIN THE LIVER, WHICH, IF NOT CONTROLLED, CAN LEAD TO INFLAMMATION.**

— PROFESSOR DR TOM CHERIAN, Senior liver transplant surgeon.

SYMPTOMS

Bleeding from the intestines or elsewhere, itching, jaundice (yellow skin and eyes), ascites (water within the abdomen), are some symptoms that suggest

HRITHIK ROSHAN'S SISTER SUNAINA SHARED HER INSPIRING JOURNEY OF OVERCOMING FATTY LIVER SHE ASSERTS SHE IS NOW "COMPLETELY CURED" OF HER GRADE 3 FATTY LIVER.

IT IS SO COMMON THAT MANY PEOPLE THINK THAT FATTY LIVER IS NOT A SERIOUS ABNORMALITY AND CAN BE IGNORED. HOWEVER, THIS IS NOT TRUE. A RECENT STUDY CONFIRMED THAT LIVER TRANSPLANTATION FOR FATTY LIVER NOW REPRESENTS THE FOURTH MOST COMMON REASON FOR TRANSPLANTATION IN PATIENTS.

“CONSIDERING THE MANY FUNCTIONS PERFORMED BY THE LIVER, MAINTAINING A HEALTHY LIVER WILL SIGNIFICANTLY IMPACT OVERALL HEALTH AND WELL-BEING. OTHERWISE, IT WOULD LEAD TO DISEASES LIKE ACUTE (SUDDEN) HEPATITIS (INFLAMMATION), CHRONIC (LONG DURATION) HEPATITIS, FATTY LIVER DISEASE, CIRRHOSIS (SCARRING), AND LIVER CANCER. AMONG THESE DISEASES, HEPATITIS IS COMMON; CAUSES INFLAMMATION OF THE LIVER, WHICH IN MANY CASES IS SELF-LIMITING. NONETHELESS IT CAN PROGRESS TO FIBROSIS (HARDENING), CIRRHOSIS, OR LIVER CANCER.”

— Dr ASHA SUBBALAKSHMI, Head of the Department of G.I., CARE Hospitals

### Hrithik's leg injury delays dance number with Jr NTR in War 2

**J**r NTR is all set to make his Hindi film debut with *War 2*, starring alongside Hrithik Roshan. Directed by Ayan Mukerji and produced by Aditya Chopra, the film has been generating a lot of buzz. NTR and Hrithik started rehearsing for a high-energy dance number that appears in the film's climax. They spent nearly 15 days preparing for the sequence. However, during the shoot, Hrithik sustained a leg injury, forcing him to take a break on doctors' advice. Due to this, the song's shoot has been postponed. NTR, who had been stationed in Mumbai for the filming, is now returning to Hyderabad because of the delay, a source revealed. Most of the film, including its action sequences and dialogue portions, has already been completed. Only this dance number and a few remaining scenes are yet to be shot. Despite this minor setback, the makers remain committed to releasing *War 2* on August 15, coinciding with Independence Day. In the film, NTR takes on a negative role, marking his grand entry into Bollywood.

# Panels soon to implement 'right to die with dignity'

**Bengaluru hospitals expect their committees to be functional by end of April**

**TINI SARA ANIEN**  
TEAM METROLIFE

**M**any hospitals in Bengaluru are setting up committees to implement 'the right to die with dignity'. They expect the committees to be functional by next month.

Karnataka is the first state to adopt the Supreme Court's direction to allow 'the right to die with dignity'.

In late January, the Karnataka government said it would provide the right to terminally ill patients with no hope of recovery. It also instructed hospitals to form two committees to suggest such patients to the judiciary – 'the right to die with dignity' requires a court order.

Some hospitals are waiting for detailed instructions, while others are in the process of setting up committees.

## 'Best practices'

Dr Radheshyam Naik, consultant medical oncologist, hematologist and bone marrow transplant physician with Samprada Hospital, says his hospital's committee will include two doctors (one internal and one from another hospital), a lawyer, and a female social worker.

Though new to India, the right to die with dignity is common in countries like The Netherlands, and their hospital plans to adopt their best practices. "The doctors on the committee could be intensivists, ICU specialists, oncologists, anesthetists and physicians," he says.

Dr Sunil Karanth, chairman and consultant (critical care medicine), Manipal Hospital, Old Airport Road, says the right to die with dignity has come about

The 2010-Bollywood film 'Guzarish', starring Hrithik Roshan, is about a paralysed magician-turned-radio jockey, who files a petition in court seeking permission to end his life. It explores the idea of active euthanasia, allowed in some countries but banned in India.

after long years of discussion.

"The primary medical board will include the primary doctor treating the patient, and two other subject expert doctors with at least five or more years of experience in their specialities. The secondary medical board will include three other doctors (who are not part of the primary board) from the same institution with five or more years of experience, including one from the hospital, selected by the district health officer," he says.

The order from the state government notifies that the nominated member from the District Health officer could be any of the doctors empanelled with the state's brain stem declaration committee.

"Our committee should be ready by April. We will provide basic training to our doctors to understand the legalities and the protocol," he says.

Once the primary board comes to a consensus with the patient's caregivers on the decision to withdraw life sustain-

ing treatment, the secondary board will need to give its decision within 48 hours, he explains.

## Legal challenges

Dr Harish Reddy, group medical director, HCG Hospitals, says, "Our hospitals will need to intensively train doctors to understand the legal aspects."

"As we work towards forming a team, we want them to be aware of the importance of prognostication and the importance of the family's consent," he told *Metrolife*.

In case of comatose patients, no family member should be able to take advantage of the situation. Also, the team will be trained to handle conflicts which arise when a family member is not aligned with the decision of the primary family member or caregiver, he says. The HCG panel will be multidisciplinary and include oncologists, intensivists, and palliative care specialists. "A list should be ready in two weeks. The committee should be ready by April end," he says.

## 'Counselling a must'

Dr B L Sujatha Rathod, director of medical education, Karnataka, says emotional and legal aspects should not be neglected.

"Counselling the family which allows its kin to be taken off life support is needed. Assuring and reassuring them and getting a well-informed consent should be focused on. Grief counsellors or psychologists can also help the family understand organ donation," she says.

Taking a person off life support calls for decisions such as "determining at what stage a person should be taken off the ventilator". "Multiple expert opinions should be considered. It is also important to document all these steps on written and video recordings," she says.

## MINISTER SAYS...

Health Minister Dinesh Gundu Rao on January 31 posted on X that hospitals must set up the primary and secondary medical boards, comprising three registered medical practitioners each, to implement the right to die with dignity.

"The secondary medical board must have a registered medical practitioner nominated by the District Health Officer," his post said.

## WHAT'S ALLOWED

Withdrawal of life support under certain circumstances, is now legal in Karnataka.

Active euthanasia, or the act of ending a patient's life with the administration of a lethal substance, is not allowed in India. It is a criminal offence.

# Fatty liver: The emerging crisis

Over 45% Indians are affected by non-alcoholic fatty liver disease (NAFLD), warns expert

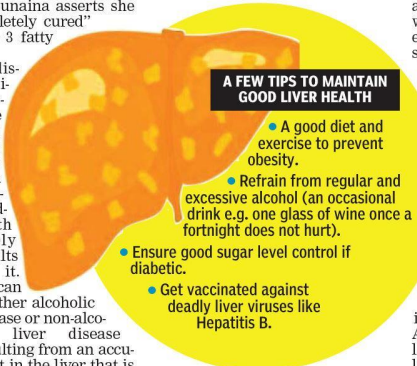

SWATI SHARMA  
DECCAN CHRONICLE

Recently, Bollywood actor Hrithik Roshan's sister Sunaina shared her inspiring journey of overcoming fatty liver, through mindful eating and regular exercise, Sunaina asserts she is now "completely cured" of her Grade 3 fatty liver.

Fatty liver disease, a condition characterised by the accumulation of fat in the liver, is becoming a growing concern worldwide, with approximately 30% of adults impacted by it. Fatty liver can manifest as either alcoholic fatty liver disease or non-alcoholic fatty liver disease (NAFLD), resulting from an accumulation of fat in the liver that is not linked to excessive alcohol intake. "Fatty liver is found in one among five individuals in India, and most of them consider it normal, though it is not really so. Fatty liver is due to excess fat within the liver, which, if not controlled, can lead to inflammation, scarring at a later stage, liver cirrhosis. With 30 per cent of the population suffering from incidence of severe fatty liver, it is a cause for concern," explains Professor Dr Tom Cherian, senior liver transplant surgeon and managing director of South Asian Liver Institute.

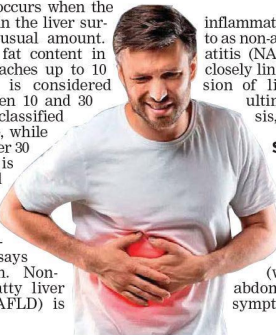

CAUSES

Fatty liver occurs when the fat content in the liver surpasses the usual amount. "When the fat content in the liver reaches up to 10 percent, it is considered mild; between 10 and 30 percent is classified as moderate, while anything over 30 percent is deemed severe and necessitates medical intervention," says Dr Cherian. Non-alcoholic fatty liver disease (NAFLD) is

— PROFESSOR DR TOM CHERIAN, Senior liver transplant surgeon.

inflammatory aspect referred to as non-alcoholic steatohepatitis (NASH). The latter is closely linked to the progression of liver scarring and ultimately, liver cirrhosis,” he adds.

SYMPTOMS

Bleeding from the intestines or elsewhere, itching, jaundice (yellow skin and eyes), ascites (water within the abdomen), are some symptoms that suggest

the presence of advanced liver disease or cirrhosis. "But it must be noted that early fatty liver is virtually symptom free. It is only during the advanced stages that it gets identified in patients. Although liver biopsy is the only method of confirming the presence of NAFLD, basic blood tests and a good quality ultrasound can warn of the presence of this disease in most patients before symptoms. However, those who are obese or diabetic must check their livers once a year via ultrasounds and blood tests," says the Dr.

DIAGNOSIS

In recent times, it is not unusual for someone to have an incidental ultrasound report that says 'grade 1 or 2 fatty liver'. In fact, it is so common that many people think it is not a serious abnormality and can be ignored. However, this is not true. A recent study confirmed that liver transplantation for fatty liver now represents the fourth most common reason for transplantation in patients.

IS FATTY LIVER DISEASE IRREVERSIBLE?

"In the early stages (grade 1 to 3), early intervention can reverse the process of the disease. But once cirrhosis sets in, in most cases even if the injury is removed, further progression and symptoms is likely," he says.

NASH can advance to cirrhosis in 9-20 percent of patients, with about half experiencing symptoms within seven years, and it is also linked to the onset of liver cancer. Liver transplantation (LT) is the preferred approach for these patients, and the results are promising, with 1- and 5-year survival rates reaching 80 percent.

NON-ALCOHOLIC FATTY LIVER DISEASE CASES RISE

Due to obesity, hypertension and diabetes mellitus, the prevalence is found to be as high as 45 per cent. Carbohydrates, in the form of rice, are a central component that can lead to accumulation of triglycerides within the liver. "This process, overtime, leads to significant liver scarring and eventual progression of disease. It is a preventable disease if people take the right steps in time," warns Dr Cherian.

HRITHIK ROSHAN'S SISTER SUNAINA SHARED HER INSPIRING JOURNEY OF OVERCOMING FATTY LIVER SHE ASSERTS SHE IS NOW "COMPLETELY CURED" OF HER GRADE 3 FATTY LIVER.

IT IS SO COMMON THAT MANY PEOPLE THINK THAT FATTY LIVER IS NOT A SERIOUS ABNORMALITY AND CAN BE IGNORED. HOWEVER, THIS IS NOT TRUE. A RECENT STUDY CONFIRMED THAT LIVER TRANSPLANTATION FOR FATTY LIVER NOW REPRESENTS THE FOURTH MOST COMMON REASON FOR TRANSPLANTATION IN PATIENTS.

“CONSIDERING THE MANY FUNCTIONS PERFORMED BY THE LIVER, MAINTAINING A HEALTHY LIVER WILL SIGNIFICANTLY IMPACT OVERALL HEALTH AND WELL-BEING. OTHERWISE, IT WOULD LEAD TO DISEASES LIKE ACUTE (SUDDEN) HEPATITIS (INFLAMMATION), CHRONIC (LONG DURATION) HEPATITIS, FATTY LIVER DISEASE, CIRRHOSIS (SCARRING), AND LIVER CANCER. AMONG THESE DISEASES, HEPATITIS IS COMMON; CAUSES INFLAMMATION OF THE LIVER, WHICH IN MANY CASES IS SELF-LIMITING. NONETHELESS IT CAN PROGRESS TO FIBROSIS (HARDENING), CIRRHOSIS, OR LIVER CANCER.”

# The rise of the zombies

As horror comedies have gained momentum in the last two years, there is another genre creeping into the Hindi film industry— zombie fiction. We have heard that Hrithik Roshan, Kartik Aaryan, and Ranveer Singh are each developing zombie action films, sparking a “silent war” among each other. Reportedly, Hrithik has acquired the rights to adapt *I Am Legend* (2007) for ₹12 crores and is actively

developing it with *Kill* (2023) director Nikhil Nagesh Bhat. Reports suggest that Ranveer too is producing a zombie film through his own company, which he plans to launch later this year. There is also news that Kartik has approached T-Series to develop a large-scale zombie project starring him, which he wants to market as a “genre-defining movie.”
